

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	03 October 2026
Team ID	SWTID-2026-3114
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Step 1: Team Gathering, Collaboration and Select the Problem Statement

The team discussed the common issues faced while creating and updating Incident records in ServiceNow. The discussion focused on incorrect data entry, missing assignment information, improper field updates, and unwanted State changes through list editing.

Selected Problem Statement:

ServiceNow Incident users may enter incomplete or incorrect information because important fields are not dynamically controlled or validated based on Incident conditions, which can result in inconsistent Incident records.

Step 2: Brainstorm, Idea Listing and Grouping

The team generated the following possible solutions:

- Automatically set Urgency to High when Impact is High.
- Make the Urgency field read-only for High Impact Incidents.
- Validate the Assigned To field before saving.
- Prevent State changes through list editing.
- Dynamically control Incident fields based on conditions.
- Display informative and error messages to guide users.

Idea Grouping

Automation

- Automatic Urgency Update
- Informational Messages

Field Control

- Urgency Read-only Control
- Dynamic Field Control

Validation & Restriction

- Assigned To Validation
 - State Change Restriction
-

Step 3: Idea Prioritization

The brainstormed ideas were prioritized based on their **importance to the Incident management process and feasibility of implementation in ServiceNow**.

Idea	Importance	Feasibility
Automatic Urgency Update	High	High
Urgency Read-only Control	High	High
Assigned To Validation	High	High
State Change Restriction	High	High
Informational Messages	Medium	High
Dynamic Field Control	High	High

Selected Ideas

Based on the prioritization, the team selected **Automatic Urgency Update, Urgency Read-only Control, Assigned To Validation, and State Change Restriction** for implementation.
