

Customer Journey Map – ServiceNow Incident Management

 Customer: ServiceNow Incident Management User

 Steps What does the user do? (action/behaviour)	1  Create Incident	2  Enter Details	3  Set Impact	4  Control Urgency	5  Assign Incident	6  Validate & Save	7  Manage State	8  Complete Update
 Interactions What interactions do they have at each step along the way?	Clicks "Create Incident" and opens the form.	Enters incident details (short description, category, etc.).	Selects Impact (e.g., High, Medium, Low).	Reviews Urgency (set automatically or manually).	Selects Assigned To (user or group).	Checks for validation messages and clicks Save.	Updates State through the form (not list edit).	Confirms the record is saved and continues working on the incident.
 Goals & Motivations What do they want to achieve? (why do they do it?)	Create a new incident record.	Provide accurate and complete information.	Set correct Impact for the incident.	Ensure correct Urgency for the incident.	Assign to the right person or group.	Save the record without errors.	Update status safely without accidental changes.	Maintain a consistent and accurate incident record.
 Positive Moments What does the user enjoy? (value, delight, satisfaction)	Simple and clear incident form.	Helpful field hints and dropdowns.	Automatic Urgency update for High Impact.	Field is controlled and read-only when needed.	Validation ensures correct assignment.	Clear success and information messages.	State update is restricted and safe.	Smooth completion with no incorrect updates.
 Negative Moments What strips does a typical person find frustrating, confusing, annoying, costly, or time-consuming?	Too many fields to fill.	Wrong or incomplete data entry.	Confused about Impact values.	Manual update of Urgency.	Missing Assigned To details.	Errors while saving (missing fields).	Accidental state change through list editing.	Repeated corrections if data is incorrect.
 Areas of Opportunity How might we make each step better? (What ideas do we have?)	Provide a guided incident form layout.	Add field-level help and examples.	Show Impact-Urgency dependency clearly.	Use dynamic field control (read-only).	Enforce mandatory Assigned To with validation.	Display clear validation and info messages.	Disable list editing for State field.	Provide a summary before final save.
