

Project Design Phase-II

Data Flow Diagram & User Stories

Date	3rd October 2026
Team ID	SWTID-2026-3114
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagram:

User Stories:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Incident User	Incident Field Control	USN-1	As an Incident user, I can set the Impact of an Incident so that the system can apply the appropriate field controls.	When Impact is set to High, the High Impact UI Policy is triggered.	High	Sprint-1
Incident User	Automatic Urgency Update	USN-2	As an Incident user, I want Urgency to be automatically set to High when Impact is High.	When Impact is set to High, Urgency is automatically set to High and an information message is displayed.	High	Sprint-1
Incident User	Urgency Field Control	USN-3	As an Incident user, I want the Urgency field to become read-only for High Impact Incidents.	Urgency cannot be manually changed when Impact is High.	High	Sprint-1
Incident User	Assigned To Validation	USN-4	As an Incident user, I want the system to validate the Assigned To field before saving a High Impact Incident.	The record cannot be saved when Impact is High and Assigned To is empty, and an error message is displayed.	High	Sprint-1
Incident User	Reverse Condition	USN-5	As an Incident user, I want field controls to revert when the High Impact condition is no longer true.	When Impact is changed from High to another value, the UI Policy changes are reversed.	Medium	Sprint-1

Incident User	State Change Restriction	USN-6	As an Incident user, I want to prevent State changes through direct list editing.	Editing State from the Incident list is blocked and a warning message is displayed.	High	Sprint-2
Incident User	Incident Update	USN-7	As an Incident user, I want to update an Incident through the form so that valid changes can be saved.	Valid Incident updates are successfully saved through the Incident form.	High	Sprint-2
Administrator	Configuration Management	USN-8	As a ServiceNow administrator, I can configure Client Scripts and UI Policies to control Incident form behavior.	Active Client Scripts and UI Policies execute according to their configured conditions.	High	Sprint-2
Administrator	Testing & Validation	USN-9	As a ServiceNow administrator, I can test the configured controls under different Incident conditions.	Mandatory enforcement, successful save, reverse condition, list edit blocking, and form-based updates work as expected.	Medium	Sprint-2
