

Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	3rd October 2026
Team ID	SWTID-2026-3114
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Technical Architecture:

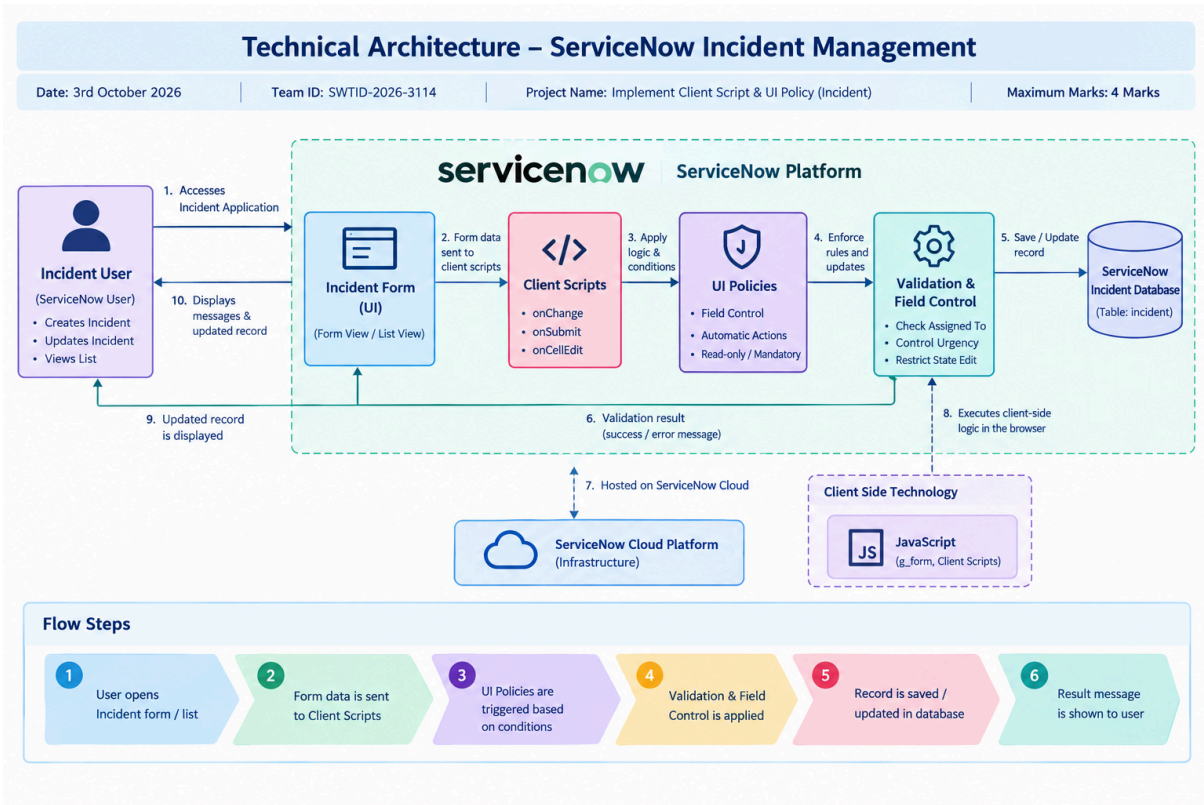

Table-1 : Components & Technologies:

S.N o	Component	Description	Technology
1.	User Interface	Interface through which users create and update Incident records.	ServiceNow Incident Form & List View
2.	Application Logic-1	Automatically updates Urgency when Impact is changed to High.	JavaScript Client Script – onChange
3.	Application Logic-2	Validates Assigned To before saving a High Impact Incident.	JavaScript Client Script – onSubmit
4.	Application Logic-3	Prevents State changes through direct list editing.	JavaScript Client Script – onCellEdit
5.	Database	Stores Incident details such as Impact, Urgency, Assigned To and State.	ServiceNow Incident Database
6.	Cloud Database	No separate cloud database is used. Incident data is stored within the ServiceNow platform.	ServiceNow Platform Database
7.	File Storage	No separate file storage is required for the implemented solution.	Not Applicable
8.	External API-1	No external API is required for the Incident field controls.	Not Applicable
9.	External API-2	No external API is used in the implementation.	Not Applicable
10.	Machine Learning Model	No machine learning model is used in this project.	Not Applicable
11.	Infrastructure (Server / Cloud)	The application is configured and executed within the ServiceNow cloud platform.	ServiceNow Cloud Platform

Table-2: Application Characteristics:

S.N o	Characteristics	Description	Technology
1.	Open-Source Frameworks	No external open-source framework is required. The solution uses native ServiceNow configuration and scripting features.	ServiceNow Platform APIs & JavaScript
2.	Security Implementations	Incident access and modification are controlled through ServiceNow user roles and platform access controls. The solution also prevents unintended State changes through list editing.	ServiceNow Roles, Access Controls & Client Scripts
3.	Scalable Architecture	The solution uses the ServiceNow platform and applies Client Scripts and UI Policies at the Incident form level, allowing the configuration to be used across Incident records.	ServiceNow Platform
4.	Availability	The configuration is hosted within the ServiceNow platform and is available when users access the Incident application.	ServiceNow Cloud Platform
5.	Performance	Client-side validation and field control are executed directly on the Incident form, providing immediate response without requiring unnecessary server-side processing.	JavaScript, g_form , Client Scripts & UI Policies
