

Project Design Phase
Proposed Solution Template

Date	3rd October 2026
Team ID	SWTID-2026-3114
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	ServiceNow Incident records may contain incomplete or inconsistent information because fields are not dynamically controlled and validated based on Incident conditions.
2	Idea / Solution Description	Implement Client Scripts and UI Policies to dynamically control Incident fields, automatically set Urgency to High for High Impact Incidents, validate Assigned To before saving, and prevent State changes through list editing.
3	Novelty / Uniqueness	Combines UI Policies with onChange, onSubmit, and onCellEdit Client Scripts to provide real-time field control, automatic updates, validation, and list-edit restrictions within ServiceNow.
4	Social Impact / Customer Satisfaction	Reduces incorrect data entry, improves Incident record accuracy, provides immediate feedback, and makes Incident management more consistent and reliable.
5	Business Model (Revenue Model)	The solution is intended for organizations using ServiceNow. It improves operational efficiency by reducing manual validation and incorrect Incident updates.
6	Scalability of the Solution	The solution can be extended to additional Incident fields, conditions, and other ServiceNow tables by creating additional Client Scripts and UI Policies.
